Professional Bike Components

CONTEC – More than bicycle. Honest passion.

Bikes do not only mean transportation for us, it is our passion. We want to inspire your riding with CONTEC since over 10 years. Honest technology, functionality, elegant and less than a fortune.

We are constantly developing our wide ranged program to introduce to all cyclists our newest and best product ideas. We consider how we make our CONTEC products even better to give you the best bicycle experience on every kilometer every day– whether on the road, through the city, or at your next adventure.

Our new „Classic Exclusiv“ collection combines quality aesthetics and excellent natural leather materials with modern functionality and ergonomic. We thus combine class and luxury with the important properties for every cyclist comfort, durability and elegance.

We also upgraded our product line CONTEC „Neo“ and „BRUT Select“ and offer a greater variety for smart solutions, which make cycling not only colorful but also improved.

Our products are regularly awarded by the most important professional magazines with purchase tips, best notes and test victories. Such as our “Hartje Platinum” tires with extra puncture protection or “Spade” pedal, which combines the benefits of a click and flat pedal.

OUTDOOR LIGHTS

High Power helmet lights

X-POWER 850

Modus	Lumen	Light duration	weight	charging time
Overdrive	850	up to 2h		
High	600	up to 2h 40min.	light: 80g	
Standard	400	up to 4h 30min.	battery: 140g	2h
Low	180	up to 9h 40min.		
Flashing	-	up to 8h		

X-POWER 850 MINI

- LED-light - 2 white CREE (XM-L) high performance LEDs with integrated body cooling/air guide system
- 850 lumens (60 Lux)
- rechargeable via power supply
- external lithium-ion battery (7,4V 2500mAh)
- battery charging- and status indicator with automatic switch off after completion of charging
- with universal bracket and helmet holder
- incl. storage bag

Outdoor

A strong light performance is essential for outdoor sports or in general at activities outside. You are independent of the ambient light with a bright lighting and also safer on the road. CONTEC provides flexible lighting solutions, designed exactly for outdoor use, providing maximum light yield with modern LED technology, starting from simple security lights, which increase your own visibility, to extremely strong light sources which provide maximum illumination when it matters.

Thanks to durable, lightweight and powerful Li-Ion batteries, they have a long burn time.

High Power helmet and safety lights

SL-104

- LED light with 2 white SMD LEDs
- Lithium battery - using time up to 6 hours
- rechargeable via USB-connection, incl. cable
- mounting material for toolfree attachment (e.g. helmet mounting)
- weight: 19,2g

0.310.075/7 black

002795

SPARKLER W

- LED safety light with 1 white SMD LED
- anodized aluminium body
- ultralight and compact design
- incl. rubber ring for toolfree attachment
- incl. 2x CR-2032

0.310.471/8 black

001495

SPARKLER R

- LED safety light with 1 red SMD LED
- anodized aluminium body
- ultralight and compact design
- incl. rubber ring for toolfree attachment
- incl. 2x CR-2032

0.311.471/7 black

001495

WHISTLE

- LED safety light with 1 Hi-Power LED - 3 Watt
- 150 lumen, Lithium battery
- ultralight and compact design
- rechargeable via USB-connection, incl. cable
- mounting material for toolfree attachment (e.g. helmet mounting)
- weight: 52g

0.310.708/3 black

003995

TWEET

- LED safety light
- Lithium battery
- ultra light and compact design
- charging via USB connection, incl. cable
- diverse toolfree assembly possibilities

0.710.045/6 black
0.710.046/4 white002995
002995

LIGHTS

Battery Light Sets

SPEED-LED USB

- LED front light with 1 CREE XPE LED 2,5 Watt (20 lux)
- rear light with 7 Liteon LEDs
- rechargeable via USB, incl. cable

USB

0.310.144/1	coolgrey	004995

Lights

Our modern, functional lights with bright LEDs to ride safe on the road are the light you need. With CONTEC we offer you approved battery lights – optionally with USB-rechargeable battery – so that you have the greatest flexibility in your ways through the darkness.

Our modern front lights for dynamo operating leave no wishes unfulfilled in terms of brightness and style. We offer for every demand the right light – from bright entry model up to high performance front light with USB-rechargeable port for Smartphones and navigation systems.

Front lights, rechargeable batteries and for dynamo lights supply up to 40 lux and up to four times brighter light than the officially required.

Battery Front Lights

HL - 380

- LED light with 1 white LED (16 lux)
- using time up to 20 hours
- easy click-mounting
- battery indicator
- incl. 2 AA batteries
- with approval mark

0.310.918/8 black

002495

HL - 247

- LED light with 1 white LED (12 lux)
- battery indicator
- incl. 3x AAA batteries
- with German approval mark

0.310.393/4 black

001495

Battery Tail Lights

SPEED-LED

- LED light with 7 Liteon LEDs
- visibility in 300°
- with bracket for 18-50mm diameter
- 1x AAA micro battery
- with German approval mark

0.311.094/7 black/transparent red

001495

TL - 380

- LED light with 5 high performance LEDs
- using time up to 20 hours
- fast, toolless assembly
- 220° viewing angle
- with approval mark

0.311.970/8 black

001395

TL - 247

- LED light with 1 red LED
- incl. 2x AAA batteries
- with German approval mark

0.311.392/5 black

000795

TL - 104

- LED light with 3 red SMD LEDs
- Lithium battery - using time up to 3,5 hours
- rechargeable via USB-connection, incl. cable
- mounting material for toolless assembly (e.g. seat post/helmet mounting)
- weight: 16,2g
- with German approval mark

0.311.990/6 black

002795

Front Lights

HL - 2001 X / O

- 70 lux LED
- incl. stainless steel bracket and cable
- with removable front reflector
- black

0.710.813/7 with switch for hub dynamo, with standlight, with automatic switch via bright-dark-sensor

004995

HL - 2001 T

- 30 lux OSRAM LED
- incl. stainless steel bracket and cable
- with integrated front reflector and daytime running light
- with German approval mark
- black

0.710.811/1 HL-2001 T, with switch for hub dynamo, with standlight, with automatic switch on via bright-dark-sensor

003495

0.710.812/9 HL-2001 T USB, with USB output, with switch for hub dynamo, with standlight, with automatic switch on via bright-dark-sensor

003995

HL - 2000 B

- 40 lux and 15 lux
- integrated lithium-ion battery, toolfree assembly and charge via USB
- incl. stainless steel bracket and USB charging cable
- with integrated front light
- with German approval mark

0.710.814/5 black

003995

HL - 2000

- 40 lux
- incl. stainless steel bracket and cable
- with integrated front reflector
- with German approval mark
- black/silver

0.710.808/7 HL-2000 N, with switch for hub dynamo

002495

0.710.809/5 HL-2000 N+, with switch for hub dynamo, with standlight

002795

0.710.810/3 HL-2000 N++ , with switch for hub dynamo, with standlight, with automatic switch on via bright-dark-sensor

002995

MICRO

- 20 lux
- incl. stainless steel bracket and cable
- with integrated front reflector
- with German approval mark
- aluminium, polished silver

0.710.826/9 Micro N+, with switch for hub dynamo, with standlight

003995

HL - 301

- 20 lux
- incl. stainless steel bracket and cable
- with integrated front reflector
- with German approval mark
- aluminium-vaporised or black

0.710.805/3 HL-301 N, with switch for hub dynamo, aluminium-vaporised

001595

0.710.806/1 HL-301 N+, with switch for hub dynamo, with standlight, aluminium-vaporised

001795

0.710.807/9 HL-301 N+, with switch for hub dynamo, with standlight, with automatic switch on via bright-dark-sensor, aluminium-vaporised

001995

0.710.802/0 HL-301 N, with switch for hub dynamo, black

001595

0.710.803/8 HL-301 N+, with switch for hub dynamo, with standlight, black

001795

0.710.804/6 HL-301 N+, with switch for hub dynamo, with standlight, with automatic switch on via bright-dark-sensor, black

001995

RETRO CLASSIC

- 20 lux
- incl. stainless steel bracket and cable
- with integrated front reflector
- with German approval mark
- silver or black

0.710.820/2 Retro Classic N, with switch for hub dynamo, silver

001995

0.710.821/0 Retro Classic N+, with switch for hub dynamo, with standlight, silver

002295

0.710.822/8 Retro Classic N+, with switch for hub dynamo, with standlight, with automatic switch on via bright-dark-sensor, silver

002495

0.710.823/6 Retro Classic N, with switch for hub dynamo, black

001995

0.710.824/4 Retro Classic N+, with switch for hub dynamo, with standlight, black

002295

0.710.825/1 Retro Classic N+, with switch for hub dynamo, with standlight, with automatic switch on via bright-dark-sensor, black

002495

HL - 121

- 15 lux
- incl. bracket and cable
- with integrated front reflector
- with German approval mark
- black

0.710.800/4 HL-121, sidewall dynamo use

001095

0.710.801/2 HL-121 N, with switch for hub dynamo

001195

Tail Lights

TL-116

- LED rear light with 1 red LED
- dynamo powered
- fender attachment
- with integrated rear reflector
- with German approval mark

0.711.800/3 with standlight

000995

TL-117

- LED rear light with 1 red LED
- dynamo powered
- fender attachment
- with integrated reflector
- with German approval mark

0.711.801/1 with standlight

000995

TL-126

- LED rear light with 2 red LEDs
- dynamo powered
- carrier attachment
- with integrated reflector
- with German approval mark

0.711.802/9 with standlight

000995

TL-127

- LED rear light with 3 red LEDs
- dynamo powered
- carrier attachment (50-80mm)
- with integrated reflector
- with German approval mark

0.711.803/7 with standlight

000995

TL-128

- LED rear light with two bright LEDs
- carrier attachment
- with integrated large surface reflector
- with German approval mark

0.711.804/5 for dynamo, with standlight function, 2 flat plugs and push&pull clamp

001195

0.711.805/2 USB, integrated lithium-ion battery (battery life up to 6h), incl. charging cable

002495

TL-129

- LED rear light with two bright LEDs
- carrier attachment
- with integrated large surface reflector
- push&pull clamp
- with German approval mark

0.711.806/0 with standlight

001195

Dynamos

DL-120

- dynamo, plastic body
- 4 plug connections (2+/2-)
- with overvoltage protection
- release button

0.310.902/2 left mount
0.310.903/0 right mount

000995

000995

DL-150

- dynamo, aluminium body
- 2 plug connections (1+/1-)
- with overvoltage protection
- release button

0.310.905/5 self-service package, left mount

000995

0.310.410/6 bulk, left mount

000895

0.310.906/3 self-service package, right mount

000995

0.310.411/4 bulk, right mount

000895

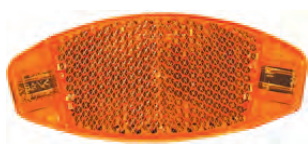

DYNAMO CAP

- protects against dynamo slipping
- fits for all dynamo types
- soft rubber

0.310.901/4 black

000195

Reflectors

SPOKE REFLECTOR

- non-looseable
- fits for all current spokes
- set of 4 pieces

0.311.946/8 self-service package
0.311.646/4 bulk

000395

000295

SPOKE STICKS

- for more secure in darkness
- fits for all current spokes
- silver reflecting

0.311.101/0 set to 8 pieces

000995

BRUT

- 1 1/8" ahead stem
- 6061 aluminium 3D forged
- divisible handlebar clamp
- CrMO bolts
- anodized black, sand blasted

0.316.890/3	25,4 x 70 mm, +/- 6°	002295
0.316.891/1	25,4 x 90 mm, +/- 6°	002295
0.316.892/9	25,4 x 100 mm, +/- 6°	002295
0.316.893/7	25,4 x 110 mm, +/- 6°	002295
0.316.894/5	25,4 x 120 mm, +/- 6°	002295

0.316.887/9	31,8 x 70 mm, +/- 17°	002295
0.316.888/7	31,8 x 90 mm, +/- 17°	002295
0.316.889/5	31,8 x 110 mm, +/- 17°	002295

Double Butted

This manufacturing process is used for weight reduction by handle bars. The butted aluminum tubes with the same stiffness values have tough different interior wall thicknesses. The handle bar ends are then durable and stable, where the most forces appear. This system allows less weight in the tube middle, where the lower forces occur.

Cold forged

This forging technology reaches an especially high strength of the material and allows a production in a very low tolerance range.

Angle adjustment

Adjustable stems can be individually adjusted to the requirements of the driver. By adjusting the stem, the driver reaches different handle bar heights and seat positions which are adapted to the different driving styles (sporty or comfortable).

Stems

BRUT SELECT

- 1 1/8" ahead stem
- cold forged 6061 aluminium
- +/- 6°
- divisible handlebar clamp
- stainless steel clamp bolts
- 31,8 x 70mm

Cartridge replacement pads

**Medium Compound**

Medium-hard compound rubber for optimum braking deceleration and a minimum wear.

**Triple Pro Compound**

3centre blocks = 3 functions
The first block increases the braking performance in all weather conditions. The middle centre block cleans the rim and the last block avoids bothering squeaking sounds.

Cartridge replacement pads - V-Brake

Medium Compound

Medium-hard compound rubber for optimum braking deceleration and a minimum wear.

Triple Compound

3 centre blocks = 3 functions
The first block increases the braking performance in all weather conditions. The middle centre block cleans the rim and the last block avoids queaking sounds.

Triple Pro Compound

3 centre blocks = 3 functions
The first block increases the braking performance in all weather conditions. The middle centre block cleans the rim and the last block avoids squeaking sounds. The special pad design increases the braking performance compared to the triple compound.

Quad Compound

4 centre blocks = 4 functions
The first block increases the braking performance in all weather conditions. The middle blocks clean the rim and increase the braking performance in wet weather conditions. The last block avoids squeaking sounds.

Dual Compound

Particulary for high braking performance also in wet conditions.

Contec Disc Pads

Increased temperature resistance minimizes the occurrence of brake fading. The full brake power is even available by operation temperatures up to 500 °C. Different material mixtures are used for mechanical and also hydraulic brake systems to achieve the best performance. All CONTEC disc pads are produced with organic materials and asbestos-free.

Wear Indicator

The integrated indicator gives an acoustical sound, when it is time to exchange the brake pads.

Pro Pads

We offer in addition, 2 different pad types for ambitious riders:

SINTERED

For very rough applications as an example in the downhill and freeride section. The metallic pads develop the full braking power by higher temperatures and do not lose their performance on longer descents.

AlloyPlate

The mixture of an organic brake pad and a mounting plate made of aluminum is a good compromise between sintered and purely organic pads. The aluminum plate guides the heat better and hereby increases the braking performance on longer descents.

Disc brakes

RIDE, SHIFT, STOP...

GOOD, BETTER, THE BEST – SHIFT AND BRAKE - MORE PLEASURE WHEN RIDING WITH CONTEC STOP UND SHIFT.

- 

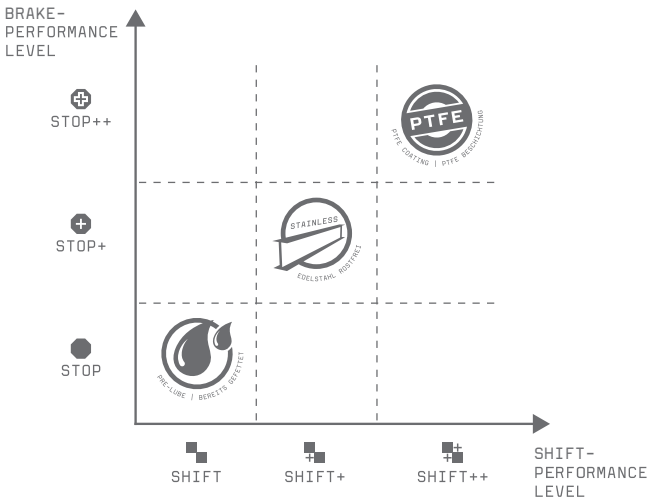

Our basis:
PreLube > greased galvanized steel cable. You think pretty well? It's actually high performance.
- 

The golden mid-class? Higher standard? Our first plus is:
Stainless > smoothest, stainless steel cable
- 

Fine steel in black design, special material from the space community:
PTFE > Eis a surface coating which makes virtually friction free slipping and perfect brake power controlling possible. Extremely resistant to environmental factors: the double performance plus.

 CONTEC ● STOP und ■ SHIFT sets are available in NEO colors.

Right choice, we say.

Contec Grips

Our CONTEC grips are a real pleasure for the hands. We pay attention by the development of our grips to offer a perfect ergonomic comfort. To this, we use different shapes and materials. Finally, the grips are in permanent contact with the hands and must be from the first to the last kilometer pleasant and secure.

Ergonomic Form

The wing-shaped design assists in supporting the hand palm and avoids an unnatural bend of the wrists. Fatigue, numbness and pain are thus prevented, especially on long rides.

Lockring Handle Bar Clamping

Easy installation and high twist-security offer our Grips with Lockring-Technology. The integrated safety-screw ensures the correct position of the grips and provides a plus in comfort and riding safety.

Material**Cork**

An optimum skin compatibility with a high breathability, sweat absorbing and micro vibration damping.

D2-two components

The soft gel mix ensures comfort and shock absorption in the field of the palm rest, the hard outside for good grip on the handlebars.

D3-three components

The middle gel mixture in the front part gives a secure hold for the fingers, is soft in the rear area to take up all vibrations and hard in the inner part to achieve a secure connection between the grip and handlebar.

Foamed Material

Shock-absorbing and reduces vibration while driving.

D2-Taped

Grip core wrapped with shock-absorbing D2 handle bar tape.

Genuine Leather

High comfort and breathability because of high quality genuine leather. Natural temperature regulation.

Bamboo - The new way of cycling

The grips are made of real bamboo cane. The pleasant surface offers a relaxed driving and the noble look attracts attention.

Bottle Cages

CONTEC bottle cages are suitable for all common standard bottles. They allow an easy take out and ensure a tight fit while driving.

Water bottles

The CONTEC water bottles have a large screw-top which makes the filling and cleaning easier. The inside coating is food-real and taste-neutral.

TECH-INFO**CONTEC Computer**

Large display, compact, sporty design – the new CONTEC C-Series

The easy to use and friendly display makes these computers to faithful companions.

An automatic scan mode with self-explanatory pictograms can be turned on and off.

Occasional and sportive ambitious bikers always make the right choice by choosing these devices.

ATS – Wireless Radio Transmission

Is the new designed, wireless, analog, encoded transmission for the C-1200W. The radio transmitter at the fork transmits permanently the signal from the magnet after each wheel rotation to the receiver integrated in the computer. The communication between both devices is without any interruption thanks to the coded signal. The maximum distance between the transmitter – receiver should not exceed 70cm.

**GPS MOUNT**

- bike computer bracket made of aluminium
- for handlebar Ø 31,8mm incl. spacer
- also compatible with Garmin and Mio 100 series
- 1/4 rotation - Twist Lock, 20g

Standard (threaded)

The headset and steering tube are connected by a thread which is also to adjust the play.

Ahead (threadless)

The threadless system is only compatible with threadless steering tubes. The cap bolt is responsible for adjusting the play of the headset bearings which is connected to a star nut that is driven down in to the steering tube. Carbon fork tubes need special extenders which are included by the manufacturer. The stem can be tightened after adjusting the bearing pressure.

This system is lighter than common threaded head sets and reduces the installing time. Two bearing

cups are pressed in to the top and bottom of the head tube. The bearings are lying in these cups on the outside of the frame.

Semi-integrated

Semi-integrated headsets reduce or allow an individual overall height. This headset is also called internal or Zero Stack (ZS) because the bearings sit inside of the head tube.

Integrated

Completely integrated headsets forgo the traditional press fit. The bearing seats are machined in to the headtube with 36° or 45°. The bearing cups can be tool less placed and the bearings are integrated in to

them. The advantage is weight reduction.

Tapered

This case means that the down side of the head tube has a larger press fit diameter than the upper side. The suspension fork can now have a continuous steering tube in 1 1/8" or a tapered tube that has downwards the diameter 1.5" and upwards 1 1/8". The advantage is a higher stability by less weight.

Ergonomic cycling

Bike riding is real pleasure when the bike is perfectly fitted to the driver. This is the only way to guarantee that even after hours in the saddle, the bottom nor do hands fall asleep and cycling remains painfree. Driving pleasure and health advantages only evolve completely under these circumstances. Pain and uncomfortable pressure or numbness are signs of impaired adaptation of the bicycle to the

individual needs of the driver. When riding a bike, man and bike should work together as a unit. This smooth interlocking of man and machine is called ergonomics. Therefore the contact points of the driver with the bicycle saddle and grips are of particular importance for the ergonomic cycling. These components provide the real sense of hard work, because the entire weight of the rider rests on them. That's why there shouldn't be a compromise

in the function of these components.

ANATOMIC 2

Contec Saddles

The right saddle for every application.

Versions

D2 - Double Density

Patented 2 component construction of the shell provides a high level of comfort even during longer rides. The saddle bowl is provided with an elastic Kratongummi application in the area of the bottom bones which serves as a cushioning for the contact zones and promises a plus on comfort.

O-Zone

A section in the shell reduces the pressure on the prostate.

O-Zone Full Cut

In addition to the cut-out in the shell, also the saddle cover is provided with a relief cutting. Pressure on the prostate and pubic bone are considerably reduced.

Volare

Now CONTEC brings up the plus in comfort to the bicycle saddle which has also been greatly appreciated and desired by cold foam mattresses with 5, 6 or even 7 zones.

3-Zone comfort plus

This is how the new developed line of saddles are called, which have a 3 –zone cold foam cushion under the seat cover. In front of a thick cushion zone for fatigue free and upright sitting there is a soft comfort zone and a flat sport zone cushion. An optimum on comfort is ensured for all sitting positions and all strain types with this positioning.

The durable elastic 3 zone cold foam is lightweight and makes the saddle as light as a feather. The saddle cools quickly off, even after being directly in the sunlight because the cold foam does not absorb heat.

Fazit: very good!
Absolutely recommended for passionate cyclist!

The Duo for the „Plus“ on Ergonomy – „Anatomic+ und Ergo+“

For more fun and healthier cycling, CONTEC has expanded the Anatomic saddles and Ergo grips with the „+“ models. Comfort arises as a result of the anatomically optimized shaping of the components on the one hand and the used material on the other. The ERGO+ grip with the wide fin counteracts the unnatural bending of the wrist. The construction of three different hard plastics supports the hands and absorbs shock and vibration at the same time. The Anatomic saddles are available in different shapes to each different seating position (upright relaxed, slightly bent and strongly bent forward) and buttock widths. The special +Gel, adapts to

the driver and its stable structure ensures a highly uniform pressure distribution. It absorbs shocks and vibrations better than conventional gel or foam pads and maintains its comfort properties over the duration of the period.

Our visually magnificent pair offers unlimited cycling pleasure by first-class ergonomic performance.

It's your choice.

CONTEC Neo Sport Saddles

CONTEC Neo Sport saddles offer different colors and saddle forms. You can find easily the right one: DYNAMIC and DYNAMIC ZX saddles are made for sporty riders, because they are slim and with an high position saddle and horizontal back on

the bicycle. ACTIVE saddle is designed for riders with upright sitting position, because more sitting surface is required. When your handlebar has the same height or is higher than your saddle than we offer you the FIT variety – comfortable support for

long distances. All Neo Sport saddles have our ergonomic O-Zone.

Contec Classic Exclusiv - timeless style for your bicycle.

Timeless, elegant and unbelievable comfortable – the CONTEC Classic Exclusiv series gives every bicycle an extra portion of classiness. High-quality leather, anatomical, functional design and perfect color matching make the components such as saddles, grips, saddle bags and handlebar tapes to ideal equipment for stylish cycle chic.

We offer for Classic Exclusiv components three tasteful leather tones: coffee, gravy and honey. We have placed special emphasis too carefully match the colors across our various product groups so that the finishing of a bicycle with Classic Exclusiv Accessories gives a harmonious complete look.

The smallest chassis of the world – The suspension seatpost SP-060 Slim

Slim and strong - the SP-060 Slim is more than the usual suspension seatpost, thanks to its innovative suspension technology. While classical telescope seatposts can only move in a vertical direction, the intelligent parallelogram construction of the SP-060 Slim moves in an arc around a virtual pivot point. Bumpy impacts can be dynamically balanced. The SP-060 Slim

provides a natural driving feeling which also brings bigger driving control next to more comfort. Disturbing side play as it can occur by normal suspension seatposts, is excluded due to the precision manufacturing of the joint elements. The seatpost body is made out of one piece 7075 aluminium in an elaborate 3D forging process for high durability, low weight and a slim look. Another advantage of the SP-060 slim is the wide range of adjustments - 3 different springs serve the adjustment to the body weight of the driver, whereby an optimal function is ensured for different types

of driver.

SP-060 Slim – The choice is yours. Decide for additional comfort.

Suspension seatposts

belong by now to almost every modern bike. They offer a significant plus in comfort, absorb shocks and swallow unevenness. Seat suspension systems reduce the strain from the buttocks and spine and help against fatigue over longer tours or on trails.

Setback / Offset

A seatpost with an offset is necessary when the seat tube angle of the frame is too steep to give the desired saddle setback the required distance between the stem and saddle, which a seatpost without any offset could reach.

AWARD 2014

The INTERLOCK idea is actually based on a true story: 2012 Vancouver, Canada. While Adrian was sitting at the hairdresser his bike has been stolen, because he left his bike lock at home. The loss of his beloved bicycle engaged him so much and he was wondering how to find a solution to always have a flexible and easy to use bicycle lock with by you – that brought up the idea of INTERLOCK or, the bike lock, which you will never forget, because it is always on your bike. Adrian's idea has convinced us and now CONTEC INTERLOCK is bringing more comfort and safeness to the bike.

- Kraton rubber coated T-grip
- digital LCD-manometer

0.331.948/0 chrome

009995

2-Way

In contrast to a one way system, pumps which are equipped with a 2 way system build up pressure in both directions (by pushing and pulling the pump piston). This allows a highly accelerated inflate process.

2-Stage

There are two different pumping modes that work over a switch, choosing between a high volume and high pressure mode. This allows an extremely fast inflation in the high volume mode, with a final achievement of the desired pressure in the high pressure mode.

Duo Head

Multi head with 2 connections – for all valves.

Clever Valve

Reversible Insert AV and DV/SV Valve.

Reversible Valve

Fits for all valves by turning the insert around.

Shock Valve

Twistable Schrader head for reaching a very high pressure.

Spare Part

TECH-INFO

Bottom Bracket

The bottom bracket contains bearings and a spindle which the crank arms are attached to. It is the most heavily used bracket in a bicycle. The force effects even tend to exceed the comparable strain of the crankshaft of a conventional average automobile.

Industrial bearings: The spindle has fits where the groove ball bearings are mounted too. This unit is fitted with two bearing cups in the bottom bracket shell. A double sealed industrial bearing ensures a protected bottom bracket.

Square taper: You can see by looking at the interface of the bottom bracket to the crank that there are tapered squares. An axial screw connection fixes the crank arms. There are two types, ISO and JIS which differ by the slope of the wedge and edge form.

JIS: The so-called Japanese Industrial Standard normalized a Japanese industry standard and is widely used for Asian machine engineering parts.

ISO: Stands for International Organization for standardization. This is mainly relevant in the European two-wheeler range for older parts.

Multi tooth: This type features many teeth at the ends of the spindle and tapered where it is appropriate. The most common are the eight teeth (Octalink) and ten teeth (International Spline Interface Standard, short ISIS).

External bearings: The bearing cups are placed on the outer side of the bottom bracket shell. The bigger distance between the bearings contributes to stiffness while allowing a lighter construction. It is essential to mount the two bearing cups exactly parallel for an optimum performance and durability.

We recommend that the bottom bracket should be assembled by a skilled person.

All CONTEC chains are supplied with connecting links, tool-less assembly and off course SRAM/SHIMANO compatible.

suitable for all internal gear hubs

suitable for all kinds of derailleur systems up to 21 gears

Anti-rust

The anti-rust-treatment is a zinc-chrome-coating which protects your chain against rust. That means your chain is 500 times more rust-resistant than a normal chain. Our anti rust chain fulfills the highest international standards of rust controll.

suitable for all kinds of derailleur systems up to 24 gears

suitable for all kinds of derailleur systems up to 27 gears

suitable for all kinds of derailleur systems up to 30 or 20 gears

Chainguide / Spare parts

Contec Pedals

We have different pedals for every opportunity. From the simple plastic pedal, over the high quality sealed MTB pedals, up to ultra-light system pedals.

Sealed industrial bearings
Exact bearing seats ensure a very smooth-running. In combination with a perfect sealing, this leads to a longer life and a significant plus in the performance.

System pedals with this Icon have a Shimano SPD adapter and therefore compatible to the most bicycle shoes located at the market. System pedals support the circular action and optimize the processing energy.

MG - stands for magnesium, one of the lightest metals in general, and as an alloy in combination with aluminum, unbeatable in terms of weight, strength and durability. Normally used in aviation and space technology, it leads with MG SPATULA II to the extraordinary low weight of 247 grams per pair – with no compromises on durability and resistance.

TEST WINNER IN AKTIV RADFAHREN ISSUE 4/2016

CONTEC PEDAL "QUICK DELUXE+" TEST WINNER

The sophisticated pedal quality led the CONTEC „Quick Deluxe+“ to victory in a wide test area in *aktiv Radfahren* magazine, issue 4/2016.

The hard facts for this victory were: clean processed nylon pedal body, good and large pedal surface, security-related sand paper edition, the deeply integrated reflectors and sealed bearing pedal axles.
The MSRP € 29,95 makes the pedal an interesting retrofit product for urban and trekking bikes.

TRUCKER DLX

Robust, elegant and very light. Our new TRUCKER DLX carriers are not only a real load wonder but also very light because of its aluminium construction. The high quality powder coating gives an elegant look which is underlined by the smart cover from the adjustment mechanism and can carry therefore the DLX (stands for deluxe) honor.

In the TRUCKER DLX family we offer the maximum compatibility and flexibility. Beside usage in 24 up to 28" wheels, we offer models for rim or disc brakes. With pannier stop; for sporty bikes to attach to the seat post.

TRUCKER DLX CLASSIC

- slim and functional carrier with spring clamp
- aluminium
- elegant front attachment covering
- max. load capacity: 25kg
- weight: 675g

Brut Disc only. 32 hole, black or white. Both are lightweight, wide and versatile but the **BRUT RC** is even lighter. Trail/AM or XC. 26, 27,5 or 29 Zoll. You have the choice!

The **BRUT** rims promise pleasure for everybody which likes it raw up to sporty. At first glance of bold simplicity, they still grow a robust and sporty note in the finish. AL6063, single eyelets - made in the EU. It doesn't take more to be happy.

LOCKS

X4 POWER QUATTRO BOLT LOCKING

· The Quattro Bolt Locking System works with a quad locking device of the bracket. The locking pins secure each side twice, allowing maximum pull-out strength.

X2 POWER DOUBLE BOLT LOCKING

· The Double Bolt Locking System disposes of a double bolt locking. This mechanism increases the maximum pull-out strength as the bracket becomes locked on both sides.

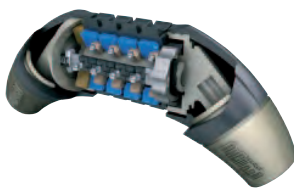

BUMP BLOCK M-CYLINDER

· Bump block is the name of the precision lock cylinder that is also used in the automotive industry. This locking cylinder has over 100.000 locking combinations and offers high security against manipulation. The locking system is enclosed in a cover made of hardened steel for additional protection and is nearly resistant against drilling, tearing or impact attacks.

LIGHT KEY LASER CUT

· Every lock with the BumpBlock M-cylinder will be delivered with four keys and in addition one LED key. To avoid damage to the key or lock, the key can only be turned after a complete insertion.

STEEL BALL CLICK-COMBO-GEAR-SYSTEM

· The CONTEC ProLocks use the Steel Ball Click-Combo-Gear-System in their combination locks. It offers high security and excellent protection against tearing or impact attacks.

SECURITY TECHNOLOGY

A lock is only as strong as its weakest link. Where other locks are only protected with one single locking bolt, the CONTEC Prolocks with the patented locking systems X 2 and X 4, lock the bolt on both sides. Only hardened steel is used in addition to have no weakness against sawing, cutting or impact attacks.

SECURITY LEVEL

The CONTEC security levels represent a guide on deciding to choose the correct bicycle lock and are divided into the different classes for a better overview. In this division the steps of the different security signs differ as for example by the hoop thickness, -material, cable diameter, locking- and cylinder technology.

9 ULTIMATE SECURITY LEVEL

PowerLocs

We designed our PowerLoc family to offer best-in-class protection against bike theft with the highest degree of user-friendliness in mind. For instance all PowerLocs are equipped with reversible security keys for easy access to your bike. We offer a broad variety of lock options under the PowerLoc label. Our PowerLocs rely on sophisticated technology that hinders the skillful and the forceful thief alike - our X2-Power Technology secures your bike with the double bolt locking system and on some models also use our strongest X4-Power Technology with four locking bolts. The steel cased BumpBlock M cylinder protects the lock against drilling, cutting or impacts.

Whether u-lock, chain or cable – CONTEC PowerLocs use the hardest materials with a smart mix of different layers, to ensure maximum theft protection, like our chain locks, with links from specially.

NeoLocs

Colorful, cool and functional – our CONTEC NEOLOCS are a real eye-catcher in urban use and to that protect your bike from thievery. You'll find all types of locks in NEOLOCS; from cable locks with or without combination cylinder lock, up to lightweight U-locks. We integrate user-friendly reversible keys, which increase the theft resistance. The NEOLOCS are covered with an environment-friendly silicone, which looks cool and protects your bike from damage for a long time.

EcoLocs

Our new EcoLocs mark the entry into our CONTEC world of mobile bicycle security. In our EcoLoc family we offer all kinds of bicycle locks, like cable, armoured cable, curly cable and u-locks.

The Ecoloc u-lock has the X2-Power double bolt locking system. The especially hardened steel withstands attacks through sawing, cutting or impacts.

Our EcoLoc cable locks ensure flexibility when needed. They are available in different security levels and also optional as a combination lock or as a curly cable lock.

For all lovers of flexibility, who have a great need for safety, EcoLoc armoured cable locks are the perfect choice: high-flexibility steel cable, protected by special hardened steel joints, offer high-level protection for your bike. The high-precision lock cylinder BumpBlock M is protected by a steel casing against drilling, cutting or impacts.

ECONOMY

Our technically high quality and price attractive starting line.

URBAN

The comfort solution for urban use.

PUNCTURE PROTECTION

One problem less thanks to innovative puncture protection technology.

E-BIKE

More range, less wear. Certified e-bike tires.

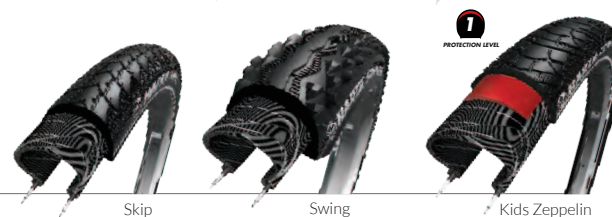

SPECIAL

Around the world or fast in urban traffic. Special tires for special tasks.

KIDS

Robust rubber compound that can withstand full braking.

RACE

Smoother run, less weight. Optimized for speed.

MTB

Control at all ways.

The rubber compound improves the general performance of a tire, which increases the ride comfort. Hartje offers two different compounds: single and dual.

SINGLE

The tread is a Hartje formula with a patented uniform rubber compound to optimize stability, durability and performance.

DUAL

Is a composition of two different rubber compounds for a stable, long-lasting middle and a softer, grippy tire shoulder. This provides more performance.

Puncture protection technology

DOUBLE BREAKER

A tire with Double Breaker has a double puncture protection system. That means twice as much protection! Besides the puncture protection layer, the tire is also equipped with a woven EPS-layer. This ultra-modern protection system reduces the eventuality of a flat tire to a minimum.

LDP

LDP contains an extra-strong 3mm rubber layer between tread and carcass. The penetration into the interior of the tire is counteracted by the strong rebounding property of the rubber. This prevents damages.

EPS

Exceptional Puncture Safety has an extra layer of patented and protected rubber polyfiber material between tread and carcass. The tight fabric and at the same time light weight puncture resistant layer prevents that the objects puncture the carcass and damage the tube. Most foldable road tires contain an EPS layer.

APL

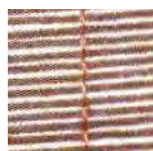

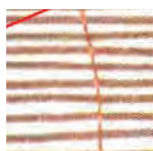

APL Anti Puncture has a remarkable 0,7mm rubber layer between tread and carcass. This additional rubber layer prevents puncturing of the tire.

Threads per inch (TPI)

22 TPI OR 60 TPI

Is the amount of nylon threads which run through a square inch of a tire carcass. A high TPI amount offers an improved puncture and tear resistance but also increases the total weight of a tire. A low TPI amount facilitates the tire adaptation to different ground conditions, a gentle contact with the surface and at the same time lighter ride and lower tire weight.

TREND

For every day

25kmThis tire is suitable for E-bikes
up to 25 km/h of speed.**Trend**

For the daily cyclist who also occasionally takes a wood, land or gravel path, but still wants the attributes of the Breaker. The tread of the Trend is suitable for all surfaces.

ALLROUND

For every terrain

ECE MARK:

**50**kmThis tire is ECE-certified
and allowed for 50 km/h of
speed.

PROTECTION LEVEL

Allround

The Allround features a grooved-slick tread design and moderate extended side tread for increased sidewall protection. The Sensamo Allround also offers an APL reinforcement for improved puncture protection and a reflective sidewall for improved night visibility.

TUSCANY

Durable

 **25**km

This tire is suitable for E-bikes
up to 25 km/h of speed.

Tuscany

This all-round tire performs well everywhere, whether on pavements, gravel, asphalt or woodland paths. The Tuscany is equally at home on city roads and gravel paths. Anti-puncture protection and extreme durability give the Tuscany a very good price-quality ratio.

PRIMO ONE

Allround

 **25**km

This tire is suitable for E-bikes
up to 25 km/h of speed.

Primo One

The Primo series starts with the most basic version. This version is nevertheless excellent and comprises a 27 TPI carcass with a rubber anti-puncture layer. This tire feels perfectly at home in the city and on country roads in particular.

ZEPPELIN

Comfortable through the city

Available for
children bikes

25km

This tire is suitable for E-bikes
up to 25 km/h of speed.

Zeppelin

For the relaxed cyclist who knows that a wider tire cycles easier. Because the tire is wider and contains more air, the Zeppelin gives a very comfortable ride. The suspension is provided by the tire itself.

 25 km

This tire is suitable for E-bikes up to 25 km/h of speed.

 1
PROTECTION LEVEL

1

Level 1: APL Anti-puncture offers an extra protective 1 mm rubber layer between the tread and the carcass.

2

Level 2: The carcass normally comprises 22 to 32 TPI. With protection level 2, the carcass comprises 60 TPI. The more threads per inch, the stronger the carcass and more puncture resistant.

3

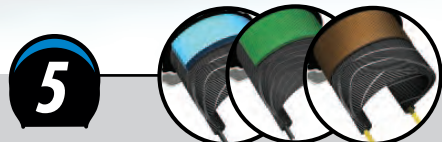

Level 3: Kevlar Inside is a technique consisting of a 1.5mm Kevlar® fibre layer, which is situated between the tire tread and the carcass.

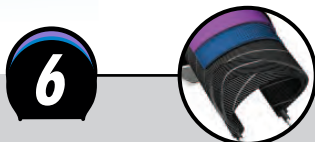

4

Level 4: Sports tires also need protection. We optimised the thinly woven EPS layer for racing and ATB tires specially for this purpose. This way the tire is extremely light and the cyclist doesn't notice the difference.

Level 5: This level contains three technologies: EPS, LPD and EPS BTB. These technologies offer a maximum protection for tires. Each technology has its own advantages.

Level 6: Twofold anti-puncture, for twice as much protection. The thinly woven EPS layer is supported by a 1 mm rubber layer. The tire remains light and flexible because it doesn't have a thick rubber anti-puncture layer.

Level 7: Level 7 goes further than you ever thought possible. We combine the anti-puncture layers of level 5 and in doing so create the best possible puncture protection available in the world of tires. The thinly woven EPS layer is applied under a 3mm LDP layer.

OTIS

Puncture protection in the city

25km

This tire is suitable for E-bikes
up to 25 km/h of speed.

5

PROTECTION LEVEL

Otis

Who doesn't want a barely not to puncture tire? Whether glass, nails or tacks, the Otis remains almost invulnerable. This tire retains its flexibility and handles very comfortable, despite the solid puncture-proof layer.

PRIMO SAFE

Effective puncture protection

25km

This tire is suitable for E-bikes
up to 25 km/h of speed.

5

PROTECTION LEVEL

Primo Safe

The Primo Safe is made to prevent punctures occurring. This is the tire's primary objective. Much to the delight of many a postman and schoolchildren cycling from one village to the next. The carcass is specially reinforced to improve balance and maintain the position of the extra thick layer. The Primo Safe gives the user a sense of security for getting home safely without the worry of a puncture along the way.

PLATINUM

Efficient puncture protection

ECE MARK:

50 km

This tire is ECE-certified
and allowed for 50 km/h of
speed.

PROTECTION LEVEL

Platinum

Thanks to the ultimate series of anti-puncture tires, you can breathe a sigh of relief. The Platinum Protector contains a perfect combination of 2 materials. The rubber layer that pushes back the sharp components and the woven EPS layer that prevents most sharp points touching the inner tube

Magazine "RADtouren" editors test Fazit:

"The HARTJE Platinum is extremely punctureproof and the driving characteristics convince on asphalt."

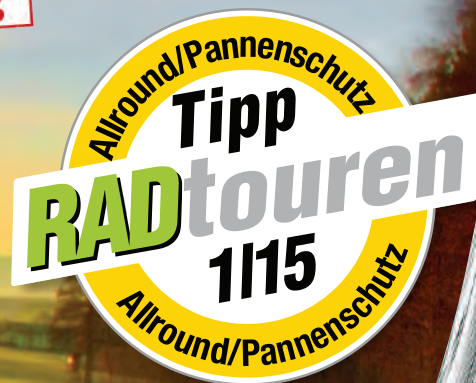

Magazine "aktiv Radfahren" editors test Fazit:

"The Platinum absolutely surprises: Uniformly good puncture resistance at a reasonable weight and third best rolling resistance value, it rolls itself up the podium at its first attempt."

The E-bike assortment

E-bike tires up to 25 km/h

E-bikes usually go much faster than normal bicycles. Speeds up to approximately 25 km/h are generally achieved. The law does not prescribe using special tires, however, this is recommended.

There are patterns available that are more suitable for e-bikes. Because the bicycles go faster and the load is higher due to the weight, the CST engineers think it only right to make these tires sturdier. The compound will then deliver less rolling resistance, which means that the battery will last longer. The carcass is reinforced and this ensures that the tires have a longer service life, despite the heavier load. For these tires, CST indicates that they are suitable for e-bikes up to 25 km/h. A reassuring thought.

E-bike tires up to 50 km/h

Faster e-bikes require a quality certificate. Our special e-bike tires are approved and bear the ECE-R75 certificate for speeds up to 50 km/h. Thanks to the specially adapted compound developed by our car tire engineers, the tires are more suitable for taking bends fast and for keeping the rolling resistance low. The tires are also highly resistant to wear and tear.

ECE MARK:

HARTJE-Tires with the ECE certificate are capable of achieving speeds up to 50 km/h. Also for standard E-bikes they go up to 25km/h we suggest to use these tires..

PRIMO AMPERO

up to 50 km/h

Primo Ampero

In recent years, we have seen more and more e-bikes and tires are obviously subject to greater wear and tear due to the simple fact that e-bikes go much faster. Some e-bikes can even reach speeds of up to 50 km/h, which is why the Primo Ampero is also tested up to this speed. If you need a tire for your e-bike, the Primo Ampero is an excellent choice as it is made specially for this type of bike.

ECE MARK:

50 km

This tire is ECE-certified and allowed for 50 km/h of speed.

E-SERIES PRO

Double puncture protection

E-series Pro

With the arrival of the E-series Pro, Hartje has set a new standard for e-bike tires. The carcass is extremely robust and the compound is specially made to generate less rolling resistance. Add to that the fast pattern and Double Breaker layer and this can justifiably be called a top-class product.

ECE MARK:

50 km

This tire is ECE-certified and allowed for 50 km/h of speed.

PRIMO PRO

High-end

ECE MARK:

This tire is ECE-certified and allowed for 50 km/h of speed.

Primo Pro

Hartje has made the best tire possible for the many cycle enthusiasts who demand the highest of standards. The carcass is woven with 60 TPI giving it a strength and flexibility normally only seen in mountain bike and racing bike tires. Hartje has also applied a special anti-puncture system that surpasses almost all other techniques. A woven layer and a layer of rubber are incorporated one over the other.

ASPERO GLOBE

For trekking tours

Aspero Globe

The Aspero Globe is versatile and suited for cycling vacations, long distance bikers and all bikers with a lot of luggage. Due to the EPS layer between the bead wires, this tire is almost indestructible. Full bike bags often cause the sidewalls of the tires to wear out faster. This tire can withstand these loads. The material is light and elastic, so that the rolling resistance is extremely low and nothing blocks a bike trip around the world anymore.

ECE MARK:

50 km

This tire is ECE-certified and allowed for 50 km/h of speed.

PROTECTION LEVEL

GRIPPER

Allround tires in top quality

Gripper

Almost all mountain bikes are used on normal streets. For those who wish to have a tire for everyday use and still has claims in comfort, grip and rolling resistance, this ultimate all-rounder is the right choice.

Art.-No.	ETRTO	INCH	TPI	TYPE	WEIGHT (G)	COMPOUND	MAX PSI	TECH	COLOR

STAYER

Top quality for loose terrain

Stayer

If you prefer rough terrain and unpaved roads, we recommend you the Stayer. Thanks to the 60 TPI carcass this tire offers optimal handling characteristics and light weight.

BEATER

Top tires withcross country profile

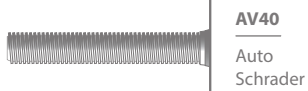

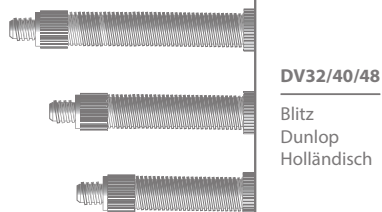

Beater

The cross country tire is designed for the diverse conditions in off-road driving. If the road is not too hard and not too muddy, the choice is then quite simple.

STAR COLLECTION

Care, Cleaning, Service

Chain Star

Normal: High-quality chain semi- fluid grease for lubricating chains and sprockets, with good flow properties and corrosion protection, moisture repellent, also suitable for O-rings , low adhesive contents with a less throw off and also suitable for use in dusty environments, water and steam resistant.

Extreme: It has a higher content of adhesive components compared to the "normal" version and is therefore particularly suitable for lubricating MTB chains in preparation for extreme environments (water, mud and snow) and high-speed motorcycle chains, also suitable for O-ring chains without corroding them.

Oil Star

Multi-purpose oil for lubricating all parts (e.g. cables) and treating rusted connections, also as a preventive protection against corrosion.

Silicon Star

Is for the lubrication and conservation of bicycles after the maintenance and also suitable for the movability of suspension forks, for greasing o-rings and rubber seals during the assembly as well as cables and the derailleur bolts.

Clean Star

It removes grease, oil and brake fluid residues by only spraying it on the parts. For the degreasing of bearings, brake and clutch pads, other metal components as also chains (before using Chain Star).

Cyklo Star

It's a bicycle detergent for cleaning the bicycle and maintenance which does not damage the varnish. Composition: tenside, emulsifiers, stabilisers, water, solvents, corrosion inhibitors.

Application: Spray on the dirty surfaces. Spread it with a brush or cloth. After about 30 seconds, rinse with water.

Lube Star

Transparent bearing grease for general lubrication of wheel bearings, hubs, headsets, pedals, etc. The grease is characterised by water resistance and guarantees a long life for all bearings.

Shine Star

Shine Star is a cleaner and preservation for the protection of metal, plastic, rubber, leather and leather articles. Provides a color restoration, emits a pleasant fragrance and restricts the re-settling of dust. Regular application extends the life-span of the treated parts.

CLOTHING

TECHNICAL BIKE WEAR

Overview of functions

3D fabric with air channels for an optimized ventilation of the hand palm. It reduces the heat related power loss during biking.

Gel cushion absorbs shocks and vibrations to protect the joints and tendons, optimal protection in case of a fall.

Protects the wrist canal, prevents tiredness of the hands.

Anatomically shaped Crash Pad protects the hand in vulnerable places without restricting the freedom of movement.

A Bi-elastic material or Carbon hard shell which protects the knuckle.

Special cut and design for women.

For undressing the glove easily and comfortably.

Gel cushions reduce the pressure and vibrations to the Ulnar nerve which runs in the hand backside to the small finger.

2 finger loop system for taking the glove off quickly and easily.

Specially designed gel padding to protect the Carpal tunnels. Padding (consisting of small silicone cylinders) fits the hand perfectly, is super flexible and gives an extra grip.

Breathability, water- and wind-resistant by a 3-layer membrane. Offers a high comfort with high durability.

Very durable silicone coating. Not slippery under wet conditions.

Washable at 30°

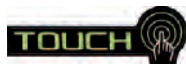

Abrasion-proof and heat-resistant high-tech fabric

Windproof, waterproof and breathable performance membrane for warm hands even when wet.

Safety reflector stripes

Special touch finger to operate the mobile phone display

Kangaroo leather is the abrasion safest and most durable leather in the world.

Kevlar

High tech material was developed in the astronautics. It has a very high wear-worth and long durability. It is used in the grip area. It does not wear and tear easily and it lasts long.

Clarino

Japanese imitation leather with high wear values and is breathable; it can also be washed unlike to genuine leather without any problems.

Spantex

Tough upper hand material which is elastic and very

breathable.

Fredtee

Used in the thumb area to wipe off sweat.

Airmesh

3D fabric with air channels for an optimum ventilation of the hand.

Digital Carbon Fiber

High-tech material is extremely durable, non-slip and elastic for the best grip.

Gel

High-tech silicone gel absorbs pressure and vibrations for the protection of the Carpal tunnel and against the fast fatigue of the hands.

Elasthan

Highly elastic, European upper hand fabric with high breathability, produced according to Oeko-Tex.

Softshell

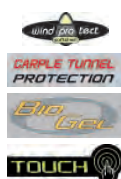

Windproof and breathable

WINTER GLOVES

Extreme cold weather conditions negatively affect the hands and the performance of riding. Not only the fun, but also the security of biking is affected.

Moisture or cold hands reduce the grip ability with the handlebar and increase the response time with switching and braking what brings a potential risk factor.

This risk is increased by the fact that poorer road conditions in the fall or winter often lead to critical situations, which must be quickly responded to.

Good winter gloves have an important, but often underestimated function.

The main principle of the Hotliner system is quite simple.

A pocket is integrated on the back hand of the glove. Push the Hotliner heating cushion in this pocket. These cushions are made of breathable materials which includes a mixture of activated carbon, iron, and water that reacts with oxygen and releases heat. The heating cushion is vacuum packed and starts its heating after opening the packaging. The cushion heats between 8-12 hours

with a temperature of 50° - 60° Celsius.

The Hotliner pocket is only separated from the hand through a thin cloth, so that the warmth is guided inwards and is isolated by the insert outwardly. This system is suited for people with blood circulation disturbances.

Heater Cushion

- for Hotliner winter gloves with a hot liner pocket

The Layer Concept

A clothing system that makes sense and individually combines different layer elements is usually associated with the concept of the "onion skin".

The targets are:

- predection: guarding against wind / moisture
- regulation: transport moisture away from the body
- isolation: heat storage

The advantage is based on the recognition that many customizable layers would be more convenient and flexible in working together as a fixed, predefined mix. Silk-Layer, Polartec™ and Rain Shield in combination allow the response to different weather or climatic conditions in cold weather, wind, rain and snow - particularly in view of a highly subjective cold or warm feeling. Individual benefits arise here for the user.

Summer gloves

The choice of the right materials determines the durability and function of the glove. An important quality criterion is to have a good grip on the inner hand. The material should adapt itself to the hand, be soft and have high abrasion (e.g. Clarino or Digital Carbon Fiber). The thermoregulation of the body is also an important point. Therefore, a good summer glove should be well ventilated to prevent heat build-up and thus heat-related performance degradation.

Summer gloves

GEL COMFORT PLUS

- summer glove
- application: tour biker, long distance biker
- upper hand: elastane, Micro mesh, neoprene, terry

**TOOL BOX**

- handy tool kit with all important tools for maintenance and repairing on the bike
- Includes:
 - 1 spoke wrench
 - 3 nut drives 8/9/10mm
 - 4 screw driver bits; 2 Phillips- / 2 straight blade
 - 1 L-key for the use of different tool parts and bits
 - 1 Allen key 8mm, incl. 1/2" square adapter, grip length 200mm
 - 1 crank extractor for square taper cranks
 - 1 cone wrench set à 2 pieces, 13/14 and 15/16mm
 - 1 open-end spanner 8/10mm
 - 1 tire lever set à 3 pieces, plastic
 - 1 monkey wrench
 - 1 pin wrench, adjustable
 - 1 Allen key set 2/2,5/3/4/5/6mm
 - 1 C-spanner
 - 1 chain whip
 - 1 straight blade screw driver
 - 1 air pressure measurer for schrader valve
 - 1 head set wrench 30/32 and 36/40mm
 - 1 Shimano cassette removal sprocket, 1/2" drive
 - 1 bottom bracket tool, 1/2" drive
 - 1 patch set
 - 1 chain rivet extractor
 - 1 pedal wrench 15/16 and 15/17mm

0.370.940/9 36-parts

“ROCK STEADY” MEETS “ROCK STEWARD”

The duo for the home workshop: The foldable, mobile workstand Rock Steady made of lightweight aluminum and durable plastic handles easily any bike up to a weight of 25 kg. The easy-to-use one hand clamp and the 360 degree rotatable work piece combined with the rock solid stability make maintenance and installation work with Rock Steady a child's play. The home workshop becomes more efficient by the likewise folding tool tray Rock Steward, where you have the most important tools quickly at hand. Rock Steady and Rock Stewart can be easily stored in the CONTEC Fiddle Case after use.

Dutch Classic

Traditional look and modern function are combined together by our Dutch Classic series. We collected all spare parts and accessories used for dutch bicycles and included them to the CONTEC Dutch Classic Series. From modern LEDs up to classic lights with bulbs, from fixturing straps to spoke clickers and from mirrors to trailer couplings.
