A LONG RACE ALWAYS A-HEAD

There is always a new limit to overcome.

That's why we have been racing the road of excellence for more than 30 years, combining the Italian style with the most advanced technological research, offering the most performing helmets and glasses to all those sharing our passion for cycling. Protecting your projects, dreams and desires.

To keep on racing, together.

RESEARCH AND DEVELOPMENT

INSPIRED
BY NATURE
REFINED
BY TECHNOLOGY

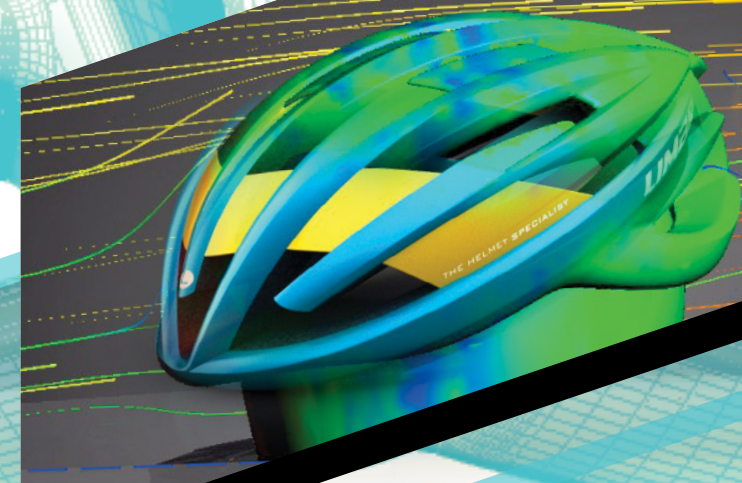

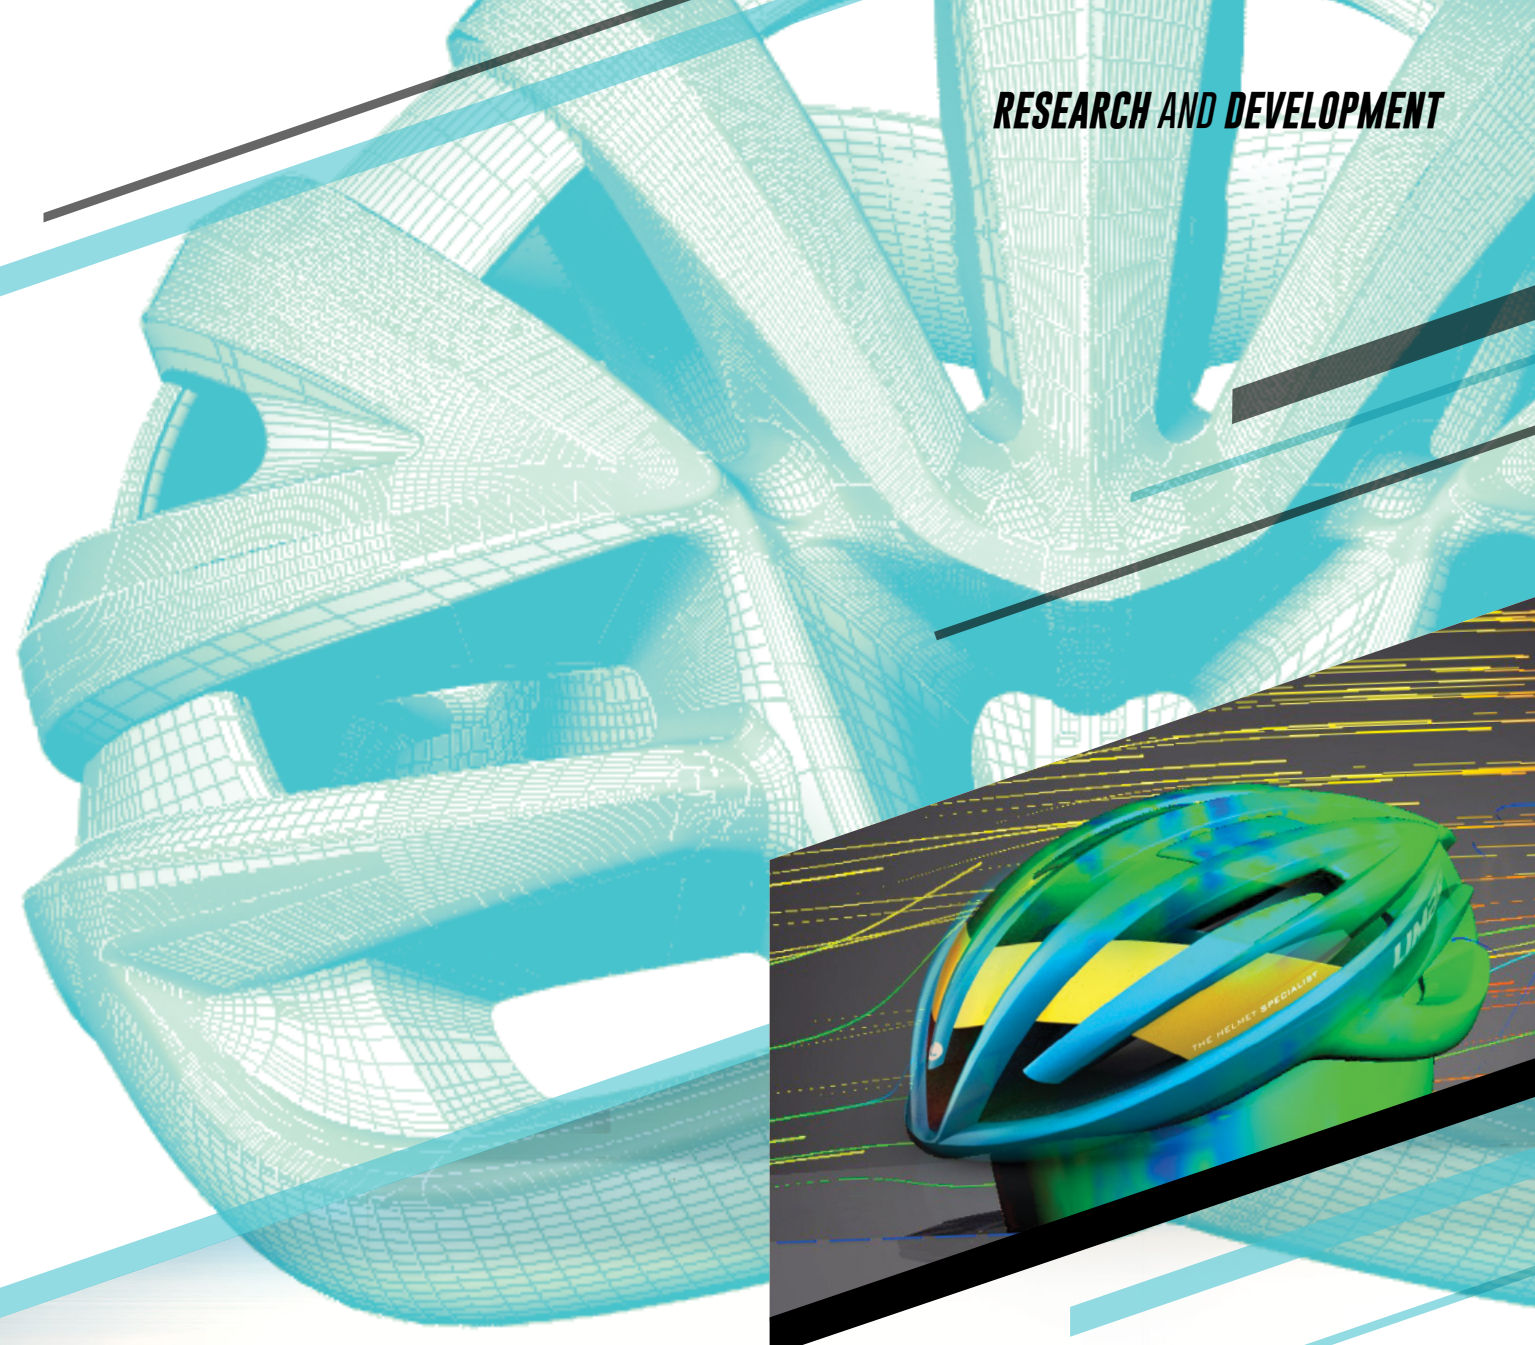

We got inspired by the most **aerodynamic** shapes, a lab that has been working for million years: **nature**.

A starting point that we have analysed, tested and developed thanks to the most innovative analysis models and virtual simulations, to finalize all tests in the real wind gallery.

To grant cyclists the most natural way to race towards the future.

RESEARCH AND DEVELOPMENT

Magny Cours
Wind gallery

REVOLUTION IS IN THE AIR

THE ANSWER IS THE *WIND*

When cycling, air is your main rival. That's why our R&D focused on the helmet aerodynamics, studying the air stream and turbulence to guarantee athletes and amateurs a real and consistent advantage. **The need to explore new limits in performance has now a solution. In the wind.**

We always compete against our limits, one second, one centimeter can really count. Both in races and in life.

With Air Pro you achieve a reduction of 0,2% in the air drag coefficient, when compared to model Ultralight+. Or if you prefer a 20% increase in efficiency. This enables you to earn up to 1 second every 10 km in a time trial. **Since every victory counts.**

THE VALUE OF JUST *ONE SECOND*

AIR REVOLUTION

Luis Leon Sanchez (Astana Pro Team)
Paris - Nice 2018

SMOOTHING THE AIR

The pyramidal surface of the longitudinal ribs reduces the impact pressure since it cuts the air and allows a smooth sliding.

IMPROVING AIR CIRCULATION

The transversal wings, thanks to the use of carbon, have a reduced thickness, and allow easy inflow and improved air circulation inside the shell, with great benefits to aerodynamics and ventilation.

PREVENTING VORTEX

The extended tail decreases the resistance to the air, allowing a gradual detachment and preventing turbulence.

EVERY DETAIL MATTERS

Our helmets are high-performance, ventilated, comfortable, protective and aero. But our search never stops, since every little detail must contribute to boost comfort and performance. That is why we continuously look for innovative solutions, for our pro and amateur cyclists helmets. **To be able to offer just the best.**

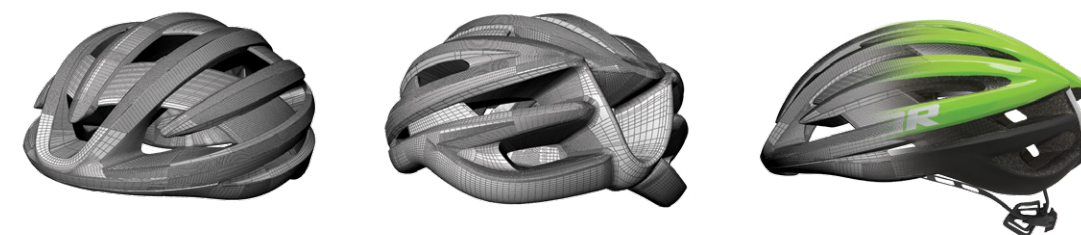

CARBON@RETECH

We have exploited the unique properties of carbon, coupling them with eps, to realize a maximum resistance core with minimum thickness. Two structural wings merge with the side ribs of the shell, creating a highly performing cage in terms of safety, aerodynamics and ventilation.

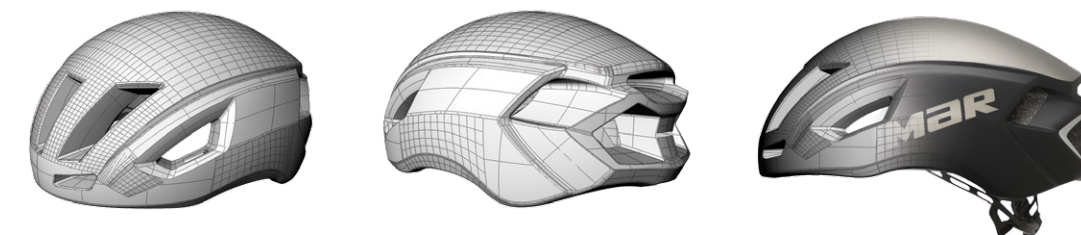

AIR FIT SYSTEM

Extremely compact, thin and light. With horizontal, vertical adjustment and webbing bracket, allowing exceptional comfort and perfect grip.

AIR STAR
THE AIR REVOLUTION STARTS HERE

DEVELOPED WITH PRO

The collaboration with the pro has always been part of LIMAR DNA, and LIMAR was the first company to sponsor a full cycling team. The recommendations of champions like Gianni Bugno, Bjarne Riis, Alexandr Vinokurov testing the helmets during races, allowed to develop helmets based on the real needs of professional cyclists, extremely demanding in terms of comfort, ventilation and, most of all, performance. The inestimable information collected along the years have directed the research and development of Limar, integrating mathematical data and the analyses of the wind tunnel tests with another even more sophisticated instrument: man, with all his sensations.

**NO INSTRUMENT

EYEWEAR TECH

To go far, you need to see clear. Both in life and in sport. That's why we have created our eyewear collection with the highest performances, taking into high consideration the real visual comfort of the rider while cycling. Models with photochromic lenses, in polycarbonate and interchangeable, to suit with flexibility any cyclist need, with a particular care to the design, studied for the perfect combination of Limar glasses with our helmets.

ENHANCE THE VISION OF YOUR ADVENTURES

RESISTANT STRUCTURE PLEASANT TO TOUCH

The frame material Grilamid TR90, a composite more elastic than standard polycarbonate, highly performing and resistant to breakage. TR90 is coupled (double injection) to a soft touch rubber, to allow a perfect adherence and avoid sliding during sports activities. Nose pad with triple injection rubber, without any metallic part to avoid any discomfort in contact with the skin.

SUN AND WIND PROOF

POLYCARBONATE SINGLE LENS WITH WIDE VISION
THE SINGLE LENS (shield) covers the whole eye area for total protection. The lens wraps and stops the light from hitting the eyes also from the side, improves aerodynamics by letting the air slide and stops the wind affecting the eyes, offering an additional protection against rain, sand and debris.

PERFECT VISION WITH ANY LIGHT

PHOTOCHROMIC LENSES
LIMAR lenses offer a perfect combination of performance and comfort, with a strong protection against the damaging effects of UV rays and guarantee an excellent visibility in any light condition.

Photochromic lens 8Cd grey to grey with antifog inside and oleophobic treatment/ Cat. 1 to Cat.3 (start changing colour to darker 20-30 sec)

HISTORY

Limar starts its activity building on the EPS moulding experience of its mother company, MPE.

1986

Limar begins the realization of specially designed bike helmets.

1988

Limar introduces the thermoformed PS shell on the polystyrene helmet.

1990

Limar produces the first world helmet made in the same colours of a team: The Team Gatorade with Bugno the great.

1993

Limar launches model F104, the world's lightest bike helmet.

1994

Thanks again to model F104, Limar is rewarded with the European Design Prize.

1997

Limar creates the first In-Mould helmet.

1999

F107 is produced, the first in-mould helmet manufactured with the double in-mould technology.

2001

Limar introduces the first wheel sizing system, light and easy to adjust.

2002

Limar launches PRO 104, the world's lightest helmet, only 180 grams.

2007

Limar introduces the brand new Ultralight PRO104: the world's lightest cycling helmet, 170 grams.

2009

2010 Limar beats its own record in lightness with the new ULTRALIGHT at only 160 g.

2011 25TH ANNIVERSARY Introduction of the new generation of Ultralight with Ultralight+ and the Superlight range.

2013 Velov receives the IF Product Design Award.

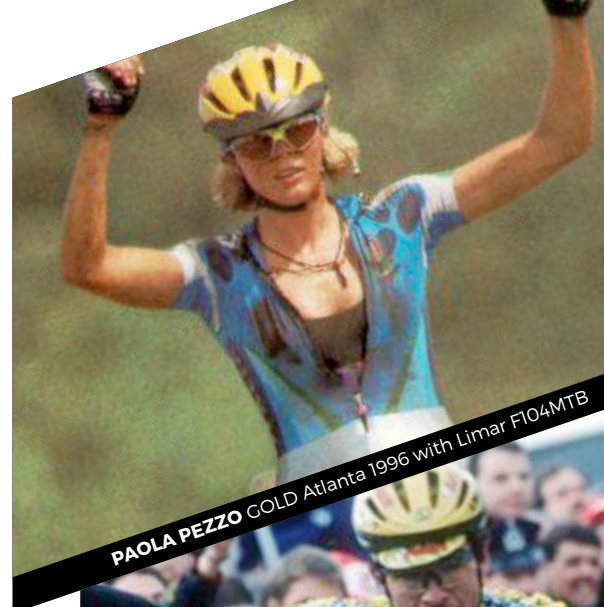

2014 Limar increases the Superlight range focusing especially on the teen and freeride world, while its communication campaign "Change to lightness" wins the prestigious Italian Parola D'Impresa award.

2015 Limar enters the Enduro, Downhill and Free-ride world with 3 stylish brand new models, as well as a new Enduro model for kid.

2016 30TH ANNIVERSARY Thirty years of passion and innovation. Limar is back in the peloton of the major cycling events around the world through the sponsorship of the new French team: Direct Energie, strenghtening at the same time the partnership with the mountain bike pro team Topeak Ergon.

2017 Starting from January 2017, for the following 3 years, also the WTT Team Astana as been wearing Limar Helmets for the coming races, enriching the portfolio of the great riders who are appreciating the lightness of Limar products.

2018 Besides protection, lightness and comfort, Limar R&D focuses on improving the aerodynamic performance of their helmets, creating the Air Revolution line. Its helmets offer maximum aerodynamics efficiency, by minimizing air impact, and therefore contributing to improve the overall performances of the rider.
